

Workplace Hazardous Materials Information System (WHMIS) Student Edition

Course Overview:

WHMIS is a hazard communication system designed to ensure workers using hazardous materials, also known as controlled products, have all the necessary information to safely handle, store and dispose of these materials.

Who Should Take the Course?

The course is intended for any employee that comes in “close proximity” to a hazardous material(s).

Course Objectives:

The primary objective for the online WHMIS course is to provide course participants with the skills necessary to access and apply the information needed to protect their health and safety while working with WHMIS controlled products. The course meets the legislated worker training requirements for all Federal and Provincial workplaces in all provinces and territories.

This course is presented in 6 modules:

- Unit 1 - Intro to WHMIS
- Unit 2 - Product Labels
- Unit 3 - Hazard Symbols
- Unit 4 - Material Data Safety Sheets (MSDSs)
- Unit 5 - WHMIS Education- Roles and Responsibilities
- Unit 6 - Exemptions and Restricted Applications

Evaluation Process:

At the end of each module, there is a quiz that each course participant must challenge and successfully complete with a passing grade before continuing to the next content module.

Upon successfully completing all modules, there is a printable certificate for your records.

Course Duration:

The course is self paced so course duration will depend on the individual participant and their prior knowledge base with the course subject matter. On average, the course will take between 2-5 hours to complete.

Note: Employers will have to supplement this training with worksite specific training to ensure that their workers are aware of and understand the hazards associated with the controlled products that they use and how to safely work with them.
